PROFESSIONAL SUMMARY

Distinguished / Principal-level software engineer with 15+ years designing and delivering enterprise platforms, distributed services, and AI-enabled systems in regulated environments. Strong hands-on background in Java, Python, TypeScript, REST APIs, Spring Boot, SQL, CI/CD, and cloud-integrated architectures, with recent delivery of LLM, LangChain, and orchestration-based solutions. Proven technical leader who decomposes complex systems into practical, operable designs, mentors engineers, and drives quality, scalability, and maintainability across teams.

CORE SKILLS

- Java, Python, TypeScript, Spring Boot
- REST APIs, service integration, system design
- Distributed systems, scalability, operability
- SQL, Postgres, MySQL, Oracle, data modeling
- CI/CD, GitHub Actions, Jenkins, Maven
- Technical vision and architecture leadership
- AI / LLM / LangChain / orchestration
- Cloud-integrated platforms and services
- Mentoring, design reviews, code quality
- Cross-functional delivery in agile teams

EXPERIENCE

Carebrain — Distinguished Engineer Sep 2025 – Mar 2026

- Rapidly ramped into a TypeScript / Next.js / NestJS monorepo from a Java/Python background and shipped high-value functionality in a low-guidance environment.
- Built a LangChain-based orchestration pipeline with intelligent model selection and answer evaluation, improving answer quality while reducing cost.
- Implemented end-to-end HIPAA audit logging for PHI movement across internal APIs, third-party services, and database transactions, embedding governance into platform behavior.
- Delivered an AI clinical scribe integrating Deepgram, AssemblyAI, ElevenLabs, AWS Transcribe, and AWS Comprehend Medical with extraction and transcription accuracy above 95%.

Commure — Senior Software Architect / Principal Software Engineer Jun 2022 – Sep 2025

- Designed and delivered AI Copilot / chat capabilities on top of clinical EHR data using RAG patterns and multiple LLMs to generate summaries and answer context-aware questions.
- Worked across architecture, product, and engineering to turn complex requirements into production-grade services and reusable platform capabilities.
- Extended platform functionality through structured data extraction, API-oriented services, and tightly integrated application workflows.

PatientKeeper / Commure — Principal Software Engineer / Architect Jan 2017 – Jun 2022

- Rebuilt portal application infrastructure to support modular deployment of screens from multiple product suites in a loosely coupled architecture.
- Designed and delivered a dashboard framework supporting 200+ reusable gadgets and components used across engineering and product areas.
- Led architecture discussions, design reviews, code reviews, mentoring, and CI/CD-integrated engineering practices while partnering closely with product managers and leadership.

Selected Earlier Experience — CashStar, Pegasystems, REZ-1, IDEXX 2009 – 2017

- Built and maintained enterprise Java systems using Spring, Hibernate, JPA, Vaadin, Tomcat, and related technologies.
- Integrated secure external services using REST, SOAP, HTTPS, ISO 8583, encryption schemes, and other reliability-sensitive interfaces.
- Owned production support, release activities, uptime, testing, and maintainability across systems with demanding operational requirements.

EDUCATION

University of Southern Maine — M.S. in Computer Science

Boston University — B.S. in Biomedical Engineering
